## Commentary

Overall financial markets continue to be adversely impacted by the confluence of record high commodity prices and the continuing credit related problems originating from the US sub prime lending market. These conditions have caused economic growth to slow considerably in both Canada and the United States while at the same time high commodity prices are beginning to lead to a marked increase in inflationary pressures. In particular, the dramatic increase in oil prices has become a large obstacle for economic recovery. Although it is difficult to know when these conditions will ease, the financial markets tend to act as a leading indicator and have in the past anticipated economic recoveries, sometimes 6 to 12 months in advance of the actual pick up in economic activity. Based on market recoveries over the past 25 years, the financial services sector has quite often been among the strongest leading sectors.

The Prime Dividend portfolio has a current dividend yield of approx. 4.0%.
